## Options

This document provides technical specifications for the E5080A ENA vector network analyzer

E5080A-245	2-port test set, 9 kHz to 4.5 GHz, with bias tees
E5080A-265	2-port test set, 9 kHz to 6.5 GHz, with bias tees
E5080A-295	2-port test set, 9 kHz to 9 GHz, with bias tees
E5080A-445	4-port test set, 9 kHz to 4.5 GHz, with bias tees
E5080A-465	4-port test set, 9 kHz to 6.5 GHz, with bias tees
E5080A-495	4-port test set, 9 kHz to 9 GHz, with bias tees

## Calibration kits and ECal modules

This E5080A data sheet also provides technical specifications for the following calibration kits and ECal modules. For models not listed in this data sheet, please download the free Uncertainty Calculator from [http://www.keysight.com/find/na\\_calculator](http://www.keysight.com/find/na_calculator) to generate the curves for your calibration kit and enable ENA setup.

## Definitions

### Specification (spec.):

Warranted performance. All specifications apply at 25 °C ( $\pm 5$  °C), unless otherwise stated, and 90 minutes after the instrument has been turned on. Specifications include guard bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

### Typical (typ.):

Expected performance of an average unit which does not include guardbands. It is not covered by the product warranty.

### General characteristics:

A general, descriptive term that does not imply a level of performance.

## Corrected System Performance

The specifications in this section apply to measurements made with the Keysight E5080A network analyzer under the following conditions:

- No averaging applied to data
- Environmental temperature of 23 °C ( $\pm 3$  °C) with less than 1 °C deviation from the calibration temperature
- Response and isolation calibration performed

### System dynamic range<sup>1</sup>

	Specification (10 Hz IFBW)	Typical (3 Hz IFBW)
9 k to 100 kHz	120 dB	137 dB
100 k to 50 MHz	129 dB	146 dB
50 M to 6 GHz	135 dB	152 dB
6 G to 8.5 GHz	132 dB	145 dB
8.5 G to 9 GHz	120 dB	135 dB

System dynamic range (specification and actual measurement data example)

1. The test port dynamic range is calculated as the difference between the test port rms noise floor and the source maximum output power. The effective dynamic range must take measurement uncertainty and interfering signals into account.

- Accuracy of the test port input power reading is relative to -10 dBm reference input power level. IFBW is equal to or lower than 10 Hz.
- Applies to the units with Serial Number Prefix MY552/SG552 and above  
The units with serial number MY551/ SG551 and below require a recalibration with TME N7842A E.05.00 and above

## Group delay<sup>1</sup>

Description	Specification	Typical
Aperture (selectable)	(frequency span)/(number of points - 1)	
Maximum aperture	25% of frequency span	
Minimum delay		Limited to measuring no more than 180° of phase change within the minimum aperture.
Accuracy		See graph below (typical)

1. Group delay is computed by measuring the phase change within a specified step (determined by the frequency span and the number of points per sweep).

The following graph shows group delay accuracy with type-N connectors, full 2-port calibration and a 10 Hz IF bandwidth.

- Calibration kit (85032F).
- Insertion loss is assumed to be < 2 dB.

In general, the following formula can be used to determine the accuracy, in seconds, of a specific group delay measurement:

$$\pm \text{phase accuracy (degrees)} / [360 \times \text{aperture (Hz)}]$$

Environment	
	This product complies with the WEEE Directive (2002/96/EC) marking requirements. The affixed label indicates that you must not discard this electrical/electronic product in domestic household waste. Product Category: With reference to the equipment types in the WEEE Directive Annex I, this product is classed as a “Monitoring and Control instrumentation” product. Do not dispose in domestic household waste. To return unwanted products, contact your local Keysight office, or see <a href="http://www.keysight.com/environment/product/">http://www.keysight.com/environment/product/</a> for more information.

## Analyzer environmental specifications and dimensions

Description	General characteristic
<b>Operating environment</b>	
Temperature	0 °C to +40 °C
Error-corrected temperature range	23 °C (± 3 °C) with < 1 °C deviation from calibration temperature
Humidity	20% to 80 % at wet bulb temperature < +29 °C (non-condensation)
Altitude	0 to 2,000 m (0 to 6561 feet)
Vibration	0.21 G maximum, 5 Hz to 500 Hz
<b>Non-operating environment</b>	
Temperature	-10 °C to +60 °C
Humidity	20 % to 90 % at wet bulb temperature < +40 °C (non-condensation)
Altitude	0 to 4,572 m (0 to 15,000 feet)
Vibration	0.5 G maximum, 5 Hz to 500 Hz
<b>Weight (net)</b>	Option 245/265/295: 20.3 kg Option 445/465/495: 22.7 kg

## Measurement Throughput Summary

Measurement throughput data is supplemental performance data.

Common condition for the measurement throughput data:

- Analyzer display turned off with: DISPlay:ENABLE OFF, DISPlay:VISible OFF
- Number of traces = 1
- firmware version: A.11.00
